

# Teknos in Focus

STAINLESS  
50 mm

# In touch with time

Teknos is one of Europe's leading suppliers of industrial coatings with a strong position in retail and architectural coatings. Teknos was founded in 1948, and during these almost seven decades, the company has expanded its presence to over twenty countries, employing altogether 1.200 people.

We offer a wide range of high-quality paints and coatings for manufacturing industry, building professionals and consumers, focusing sharply on the quality and performance of our products.

Paying close attention to continuous research and development as well as environmental aspects, we manage to meet and even exceed today's versatile needs. Industry-driven product quality, uncontested heritage and committed people help us to further develop our operations for the benefit of our customers.

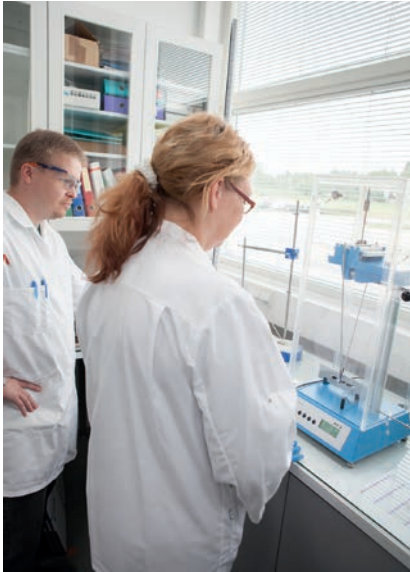

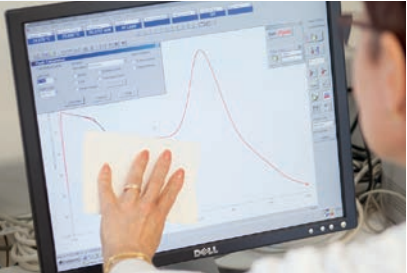

# Continuously **creative**

While the structure of the company has evolved to support both the growth strategy and current customer needs, our values have remained very much the same. As a privately owned family company Teknos believes in systematic work, long-term

planning and timely execution.

The founders of Teknos were technically oriented professionals – hence there is every reason to claim that industry-driven product properties and overall quality awareness have been

rooted deep in the company culture. Innovative product development continues to be one of the cornerstones for Teknos. Systematic research plays a key role in ensuring high product quality and best possible customer satisfaction.

CREATIVITY

PERSISTENCE

FAIRNESS

## This is how we see it

Teknos'w values are the influence behind all our operations, including our business practices as well as both internal and external communications. The values define what is important and appreciated within the company. Following them in our daily work enables us to develop our products, operations – and even ourselves as a team – for the benefit of our customers.

### **Creativity**

While creative thinking is particularly emphasized in research and development, it also manifests itself throughout the company. Creativity becomes visual in the way we respond to the evolving customer needs, both when it comes to technical properties and customer service.

### **Persistence**

The determination to discover the best possible solution for every customer need is visible in our long-term partnerships. We are committed to constantly improve our expertise and performance by working in several long-term development projects both inside the company as well as helping the customers in refining their processes.

### **Fairness**

All customers, personnel and partners are treated equally and with respect in accordance with the legislation of each country. This is reflected by our honesty and the way we keep our promises. Our knowledge and experience is openly shared with our employees.

### **The keys to added value**

Our strategy is to grow faster than the competition and to operate even more globally in the future. While these targets may sound challenging to reach, we have full confidence and trust in our ability to do it. We aim to fulfil our vision of being the leading supplier of advanced coating solutions by focusing on developing industry-driven products and excellent technical service that are able to meet the evolving customer requirements.

To achieve all that, we pay close attention to the versatile needs in our markets. By being always close to our customers we are able to deliver the same added value everywhere we operate.

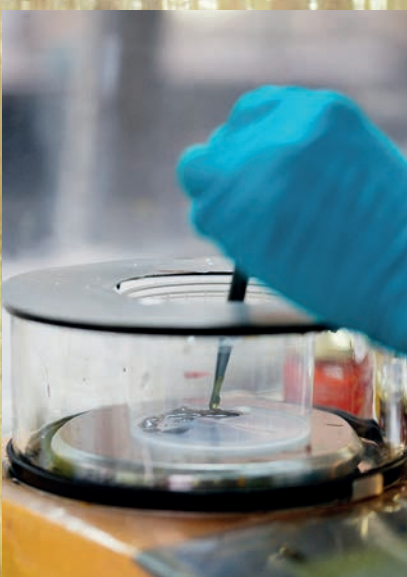

# An eye for the environment

Comprehensive recognition of environmental issues is one of the cornerstones in everything we do. We continuously seek to develop our products to make them more environmentally friendly. While improving our processes to always decrease the environmental impact and to meet the current laws and stat-

utes, we assume responsibility for our community and its well-being.

Teknos' core products are waterborne, low solvent or totally solvent-free, developed with the utmost attention to the environmental aspects. Our production facilities comply with

quality and environmental management systems according to the standards of ISO 9001 and ISO 14001. Compliance with VOC, BPR and REACH legislation, to ensure the safety of both humans and the environment, is integral to our product development activities.

# For every need and purpose

We strive, in every way possible, to help our customers find the ideal solution for their particular purposes. Utilizing thorough research as well as feedback from various market areas we continuously develop our product range to ensure the best possible customer satisfaction.

Today, Teknos offers a comprehensive range of paints and

coating solutions, manufactured to fully comply with international standards, for industrial, professional and household painters. Our strong product development benefits all customer segments, ensuring uncontested performance and cost-efficiency at all times. Combined with our wide knowledge and history of providing industry-leading quality for decades, we are confident

in our product range's ability to solve any coating challenge, in any specific situation.

The needs of our customers vary greatly, and to guarantee the best possible service to everyone, our business is divided into three segments, each operating across Teknos companies and national boundaries.

# Industrial Wood

Teknos holds a leading market position as a supplier of waterborne industrial wood coating solutions in Europe. We offer a wide range of surface treatment products, for instance for the wood construction, joinery and furniture manufacturers.

Most products are waterborne, low solvent or UV-cured. Teknos pioneered waterborne coating solutions for the European window industry over 30 years ago

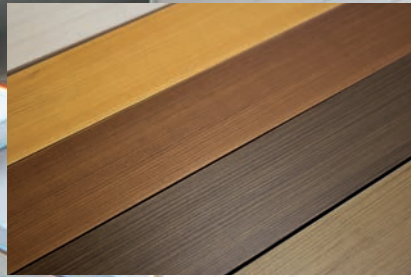

and remains at the forefront of environmentally compatible, high performance systems.

In addition to organic growth, Teknos has expanded its business through acquisitions, which have strengthened significantly Teknos skills in both interior and exterior wood coating solutions.

Teknos' wood industry products combine quality with ease of use

and are consistent with the EU's VOC directive and the Biocidal Product Regulation (BPR). In addition to environmental aspects, overall cost efficiency (consumption per unit) and recyclability have become increasingly important in the wood industry's surface coating process, further encouraging Teknos to develop competitive and innovative solutions.

# Metal Wet Paints

Teknos is the leading supplier of industrial paints for the metal industry in the Nordic countries. Within this segment, we serve a variety of customers based on a range of paint technologies, from traditional alkyd paints to high tech polyurethanes.

Teknos' certified quality and environmental management systems comply with the ISO 9001 and ISO 14001 standards, while our anti-corrosive coating systems comply with the international ISO 12944 standard.

We assist professionals who work in a wide variety of industries in finding the best possible coating solutions for different types of steel structures, machines, engine blocks and chassis components as well as other equipment and components made of metal, plastic or composite.

We continuously develop our products to meet the needs of paint shops and our customers in the metal industry. Painting process optimization and cost-efficiency with low VOC

emissions, fast curing and lead-times, high durability and an appealing surface are important aspects. Special coatings play a key role in the research and development of new coating materials.

Prompt, flexible deliveries and advanced tinting technology allow an almost unlimited number of colors and shades. We work closely with our customers to enhance the efficiency of their production processes and help them to identify the best painting systems for their needs.

# Powder Coatings

Powder coating is at the core of our strongest area of expertise. As recognition of our skills in powder coatings, we have reached the position of market leader in the Nordic countries.

Being completely solvent free and able to eliminate VOC emissions, powder coatings are an environmentally friendly choice for both

paints shops and industrial professionals. Powder coatings can be recovered and recycled – this helps the users to minimize waste and further improve the cost efficiency of their processes.

Teknos' complete powder coating tinting system offers an almost unlimited choice of colors. As we operate close to our

customers, even tight delivery schedules can be met.

Teknos has two powder coating factories. The Rajamäki factory in Finland is the largest and most modern of its kind in the Nordic countries. The other one is situated in St Petersburg in Russia, manufacturing powder coatings for the emerging local markets.

# Specialty Coatings

Specialty coatings play a key role in the research and development of new coating materials. As they are designed and manufactured for very specific and often exceptionally demanding purposes, special coatings provide a perfect platform to see what various raw materials and their combinations are really capable of. While these opportunities help ensure the best possible quality for every Teknos product, they also further enrich our knowledge and database for the benefit of future purposes. The aesthetic features of paints – such as textured and structured surfaces and metallic effects – have also gained in importance.

## Functional paints and coatings

Teknos manufactures special coatings that are able to meet the toughest expectations, for

example, for features such as heat-resistance, antimicrobial or camouflage qualities, as well as fire protection for wood and metal. Our selection of functional metal wet paints and powder coatings include e.g. anti-graffiti coatings, chemical resistant coatings, coatings with decontamination properties (such as nuclear radiation), conductive coatings, fluorescent coatings, scratch and impact resistance coatings, weldable coatings and UV resistant paints and clear coats.

UV resistant products for wood contain extra UV absorbers to maximize the coatings' durability.

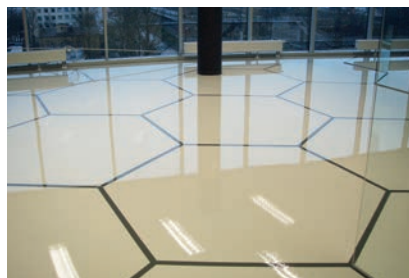

## Floor coatings

Teknos has been an expert in producing coatings for concrete surfaces for decades. An example of our product develop-

ment in this particular area is the TEKNOFLOOR product family. It comprises a perfect range of coatings for concrete floors and other surfaces.

## Road marking

Teknos also pioneered the development of road-marking paints in Finland. Already in the early 1980s we introduced two-pack compositions and paints that still appear in the Teknos product range. In the 1990s, we brought the first waterborne systems to the market. The performance, quality and environmental requirements for road markings are constantly increasing, as are the demands set by equipment technology. Today, our product range includes completely solvent-free, quicker-to-dry and extra durable road marking paints.

# Architectural Coatings

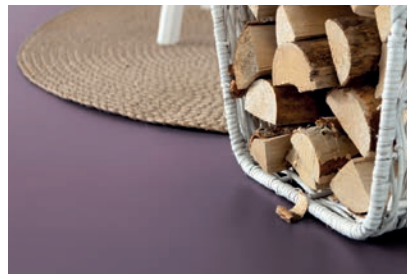

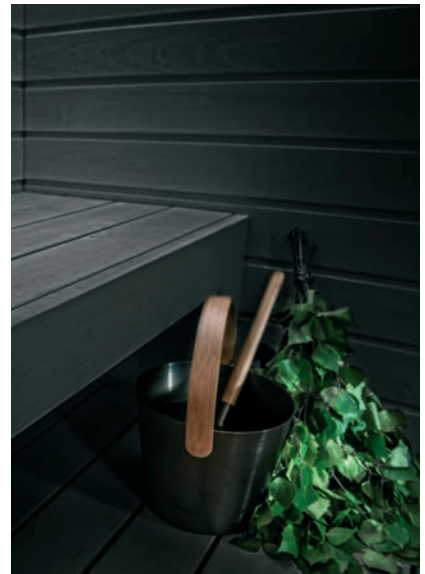

Our Architectural Coatings segment provides solutions and service for both building professionals and consumers. We offer a complete range of high quality products, from interior and exterior paints to specialist coatings. Also within this segment, Teknos utilizes the company's long history as a pioneer in paint technology. With our knowledge, strict commitment and innovative thinking, we have

developed our products to be as environmentally and user friendly as possible. Most of our paints are waterborne or totally solvent-free.

Teknos has developed, for example, TIMANTTI CLEAN acrylate dispersion paint for surfaces requiring high hygiene levels and BIORA CLEAN acrylate paint for indoor surfaces which must be easy to clean and resistant to

abrasion. The antimicrobial active ingredient, silver, prevents the spread of harmful bacteria.

Teknos architectural coatings are well represented in retail chains in Finland and Sweden. In Sweden, Teknos also has its own stores in the Gothenburg and Stockholm areas. In recent years, we have invested heavily in Russia, Poland, the Baltic countries and the CIS area.
