

HELO[®] SOLANA WAX STRONG UV PROTECTION FOR INTERIOR WOODEN SURFACES

BREATHABLE WAX WITH A BEAUTIFUL MATT FINISH

- Superior UV protection
- Non-yellowing
- Breathable
- Tintable in translucent colours
- Contains natural carnauba wax
- Up to 10-14 m²/l

HELO® SOLANA WAX is for treatment of interior wooden surfaces such as log, panel walls, panel ceilings, mouldings and interior doors. It can be used on both untreated and previously wax treated wooden surfaces. Superior UV protection means it can be used un-tinted or you can choose any colour from Translucent colours range.

SUPERIOR UV PROTECTION

Wooden surfaces indoors are exposed to the sun and needs to be protected from UV radiation. HELO® SOLANA WAX gives superior UV protection and preserves the beautiful natural tone of new timber.

A non-yellowing, dirt and water repellent wax which contains natural carnauba wax, letting the wood breathe.

Carefully apply two coats to make sure the whole area is treated.

Clear HELO SOLANA WAX turns the wood first a little yellower. Upon exposure to UV radiation, the treated surface lightens, preserving the natural colour of fresh wood.

UV RADIATION

UNTREATED SURFACE

TREATED WITH HELO® SOLANA WAX
