Trend 7 and 20

Ekora 7, 12, 20

TeknosPro 5, 7 and 10

Teknowall 07, Teknowall 05

The properties of waterborne paints are achieved after a few weeks at normal room temperature 18-22°C. Therefore, avoid soiling and cleaning the surfaces until the paint has cured thoroughly. Paints with higher gloss have a better washability than matt paints. The curing time can be up to 2-4 weeks after painting.

NORMAL CLEANING FOR CEILING PAINTS

Cleaning by moist wiping or with detergents damages the painted surface. Dry cleaning methods, such as careful wiping, brushing, vacuum cleaning etc., must be used for dirty surface.

CLEANING OF WALL PAINTS

The painted surface can be cleaned by wiping with a neutral (pH 6 - 8) detergent. Never use spirits or strong organic solvents. Follow the dilution and other instructions of the detergent producer when using detergents. Always wash from the bottom up. Rinse thoroughly with water and wipe the surface and ventilate the moist air. Note! Do not use too hot water.

STAIN REMOVAL

Bleach or Mold washing can fade away some stains (used with care). Food vinegar can be used to remove rust stains. Black discolorations resulting from rubbing metal against the surface can usually be removed with a regular eraser.
