SHEET METAL

CARE INSTRUCTIONS FOR PAINTED SHEET METAL ON FACADES, ROOFS AND WINDOW SILLS

Painted sheet metal surfaces on roofs and facades are exposed to many different types of impurities and fallout found in the air. These impurities together with water and increasing UV radiation affect these surfaces. Painted sheet metal surfaces are very durable but should still be kept clean to maintain their resistance and colour longer.

CLEANING

Dirty surfaces should be washed with a soft brush and water. High pressure washer can also be used (≥ 50 Bar). For more difficult soiling, wash the surfaces with water and RENSA FAÇADE Façade cleaner. After that, the surfaces are rinsed off with lukewarm water. Wash from the bottom up to avoid stripes after the water.

Note! Remember not to use too strong detergents as this may damage the paint.
