WET ROOM

MAINTENANCE INSTRUCTIONS FOR WET ROOMS PAINTED WITH TIMANTTI WET ROOM SYSTEM

The system provides a water resistant, impact resistant and dirt-repellent surface.

Keep in mind that a wet room requires extra care and regular cleaning to maintain its good appearance for a long time. The first time after repainting, care should be used when handling the surfaces. The surface must dry at least 7 days before being exposed to water.

Check that seals around penetrations and piercings are intact, seal new screw holes and piercings immediately.

Make sure that the ventilation is satisfactory and working. Feel free to set the door ajar and thus keep the humidity down and the possibilities for mold growth are limited.

The walls must be cleaned at regular intervals from limescale deposits, soap residues and such, especially important in exposed places such as showers and under and around bathtubs. Use lime-dissolving detergents and rinse thoroughly with clean water and dry the surface.

NORMAL CLEANING

Clean the surface with RENSA SAUNA Sauna cleaner, RENSA SUPER Paint cleaner or all-purpose cleaner. Never use spirits or strong organic solvents. Always wash from the bottom up. Rinse thoroughly with water and wipe the surface and ventilate the moist air. Note! Do not use too hot water.

STAIN REMOVAL

Bleach or mold washing can fade away some stains (used with care). Food vinegar can be used to remove rust stains. Black discolorations resulting from rubbing metal against the surface can usually be removed with a regular eraser.
